

GUIDELINES FOR 4TH SEM & INTERNSHIPS

TABLE OF CONTENTS

4TH SEM COURSES

01

02

INTERNSHIPS

SOME EXTRA
STUFF

03

04

QNA

01

**4TH SEM
COURSES**

OS

1. Listen properly in classes
2. Use Silberschatz slides along with class notes for exams: [click here for slides](#)
3. Keep good notes which you can keep revising as you'll need it a lot more than you think.
(kinda like jee short notes)

DBMS

1. Slides again: [here](#)
 2. Make good notes again for later and practice some SQL here and there (Leetcode is good)
- 

COA

1. Memorize all this

DAA

1. Try to understand in class and discuss with friends like DMS
2. Moodle slides for exam

DC

1. DC is an introduction to (a small part of) Computer Networks, which is a very important and fascinating subject.

DBMS AND OS LAB

Apart from weekly assignments there is a project which you have to submit at the end of the sem, this project is quite important as it is a good introduction for many on how to make a website and many people add it to their resume.

DBMS example: [here](#)

OS example: [here](#)

02

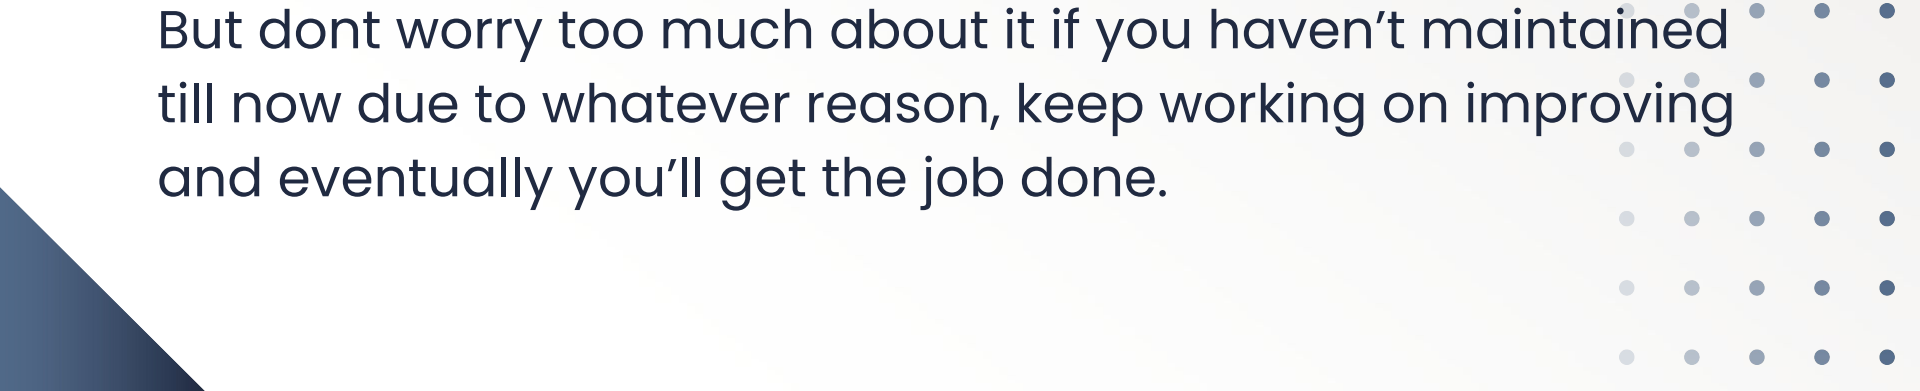

INTERNSHIPS

CGPA

Keep cg as high as possible as it's a big criteria for shortlisting (you'll see this enough in gyan)

But dont worry too much about it if you haven't maintained till now due to whatever reason, keep working on improving and eventually you'll get the job done.

RESUME

Start building a resume from now itself.

Ask any seniors who you know to share their template with you and to review yours whenever you make changes.

DSA

This Doc (Open with edu ID) made by our senior, the man the myth the legend M Shree Harsha Bhat will tell you how to approach DSA based on whatever experience level you're at right now.

OOP

Object Oriented Programming: A topic that we don't learn in coursework but is very interesting and very fundamental to writing code.

<https://www.learncplusplus.com/>

<https://www.javatpoint.com/java-oops-concepts>

<https://github.com/aman0046/LastMinuteRevision-OOP>

(there's a million other resources too, just do one properly)

INTERVIEWS

- Sitting in an interview requires a different skillset as compared to everything else you do (sitting alone in front of a screen and grinding)
- You need to be able to convey your ideas well and know how to deal with certain situations where you don't know stuff.
- Mock interviews are very important for this and if you aren't in any clubs (or even if you are) you should contact any senior and setup a few of these before the season starts so you'll know where you're lacking

03

EXTRA STUFF

GIVE THE SUBJECT A CHANCE

Some channels:

[Computerphile](#)

[Fireship](#)

[Harkirat Singh](#)

[Interesting video on NodeJS](#)

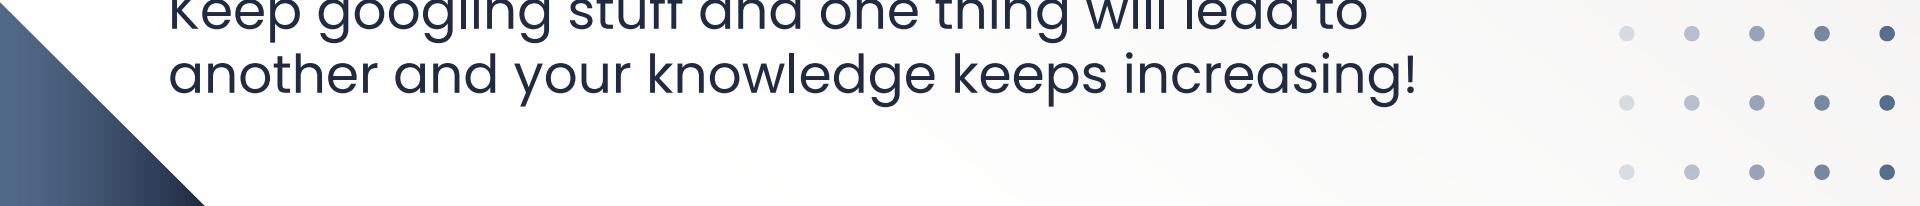

TRY TO GO IN DEPTH

Low level understanding of something always increases your confidence and interest in it.

For example, [this post](#) by my friend Sanjay- when you write `int a=5;` in C, what exactly happens?

Keep googling stuff and one thing will lead to another and your knowledge keeps increasing!

04

QNA

How we do actually get an understanding of where we stand in terms of our dsa prep for OAs?

**Do the courses we have
cover enough theory related
to computer fundamentals
(DBMS, OS) questions they
could ask us?**

How important are projects really? Does every project on your resume have to be extremely high level or can we have 1 or 2 really good ones and the rest mid level?

Now y'all ask if anything.

**Thank you for listening.
We truly believe y'all will surpass
our batch and hope you will do so.**
